On the occasion of the Centennial of the Carnegie Institution of Washington, Carnegie Observatories held a series of four astrophysics symposia in Pasadena from October 2002 to February 2003. The topics of the symposia were:

1. *Coevolution of Black Holes and Galaxies* [Ed. L. C. Ho]
2. *Measuring and Modeling the Universe* [Ed. W. L. Freedman]
4. *Origin and Evolution of the Elements* [Ed. A. McWilliam and M. Rauch]

The invited papers of the symposia, which have been peer-reviewed and carefully edited, will be published in 2004 by Cambridge University Press, as the first four volumes of the *Carnegie Observatories Astrophysics Series*. The papers from the contributed talks and posters, along with the full set of the invited papers, are available electronically at
